1) Claims 21 to 36 are pending in the instant application. Claims 1 to 20 have been canceled and claims 21 to 36 have been added as requested by Applicant in the correspondence filed 11 October of 2005.

2) The disclosure is objected to because the text "Deposit Number XXXXX" in line 28 on page 7 is incorrect.

Appropriate correction is required.

3) Claims 31 and 36 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. A properly dependent claim can not conceivably be infringed without infringing any of the claims from which it depends. See M.P.E.P. 608.01(n)III. Claim 31 is improper because it can be infringed by an isolated nucleic acid molecule that does not infringe claim 21. Claim 36 is improper because it depends from a cancelled claim.

4) Applicant is advised that should claim 35 be found allowable, claim 25 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

5) Claims 21 to 24, 26, 27, 29, 30 and 33 are allowable as written.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

Art Unit: 1649

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6) Claims 25 and 35 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. These claims encompass subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claims 25 and 35 expressly require the deposited material recited therein. Applicant, their assignee or their agent needs to provide a declaration containing the following:

The identification of the declarant.

A statement that a deposit has been made in a depository affording permanence of the deposit and ready accessibility thereto by the public if a patent is granted. The depository is to be identified by name and address.

A statement that the deposited material has been accorded a specific, recited, accession number.

A statement that the material has been deposited under conditions that assure that access to the material will be available during the pendency of the patent application to one determined by the Commissioner to be entitled thereto under 37 C.F.R. 1.14 and 35 U.S.C. ' 122.

A statement that the deposited material will be maintained with all of the care necessary to keep it viable and uncontaminated for a period of at least five years after the most recent request for the furnishing of a sample of the deposited microorganism, and in any case, for a period of at least thirty years after the date of deposit or for the enforceable life of the patent, whichever period is longer.

A statement by declarant that all statement made therein of declarant's knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with knowledge that willful false statements and the like so made are

Art Unit: 1649

punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the instant patent application or any patent issuing thereon.

Alternately, it may be averred that deposited material has been accepted for deposit under the Budapest Treaty on the International Recognition of the Deposit of Microorganisms for the Purposes of Patent Procedure (e.g., see 961 OG 21, 1977) and that all restrictions on the availability to the public of the material so deposited will be irrevocably removed upon the granting of a patent. Additionally, the deposit must be referred to in the body of the specification and be identified by deposit (accession number) number, name and address of the depository, and the complete taxonomic description.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7) Claims 28, 32, 34 and 36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

7.1) Claim 28 is vague and indefinite because the identity of the polypeptide being produced by the claimed method is not specified. The act of culturing a host cell inherently results in the production of thousands of different polypeptides.

7.2) Claim 32 is confusing because it is unclear how a polynucleotide can be "at least 97% identical" to an amino acid sequence.

Art Unit: 1649

7.3) Claim 34 is vague and indefinite because there is no antecedent basis for "the isolated nucleic acid molecule of claim 33". Claim 33 is drawn to "an isolated polynucleotide".

7.4) Claim 36 is vague and indefinite because it depends from a canceled claim.
